
(a)
error = bound
$A_i\sqrt{c_i} \leqslant \frac{1}{4}$
$A_i\sqrt{c_i} > \frac{1}{4}$
error $|\hat{\eta}_i - \hat{\eta}_i^{(-i)}|$
bound $1.04\, A_i \sqrt{q_i/(1-h_i)}\, c_i$
(b)
exact leave-one-out
one-step leave-one-out
training
mean deviance
penalty per event $t = \lambda / \sum_i y_i$
(c)
error = bound
$A_B\sqrt{c_B} \leqslant \frac{1}{4}$
$A_B\sqrt{c_B} > \frac{1}{4}$
error $|\hat{\eta}_i - \hat{\eta}_i^{(-B)}|$
bound $1.04\, A_B\, d_i\, c_B$
(d)
exact leave-one-block-out
one-step leave-one-block-out
training
mean deviance
penalty per event $t = \lambda / \sum_i y_i$
